Research Integrity in Academia

Jeannette M. Wing

Executive Vice President for Research Professor of Computer Science

Columbia University

Why is Research Integrity So Important

• Trust in science is based on trust in the conduct of science, the scientific process

Trust by whom?

Peers, media, public, funders

Violation of trust means

Potential reputational risk (to institution and individual)

Funding risk

Career risk

Elements of a Research Integrity Office

- Responsible conduct
 - Plagiarism, image manipulation, falsification, fabrication
 - Ethical standards of profession/field
 - Responsible authorship
- Conflicts of interest, conflicts of commitment
- Financial management
- Human subjects research
- Animal subjects research
- Data management
- Lab safety
- Research security
- Continuous training

Sponsored Projects Handbook

Gives practical guidance in the management of sponsored projects funded by both governmental and private organization, in accordance with the research policies and procedures of the University.

Animal Research Handbook

A companion resource to the Sponsored Projects Handbook, designed to be a reference guide for faculty and staff who are involved in research using animals.

Research Radiation Safety Handbook

Gives practical guidance on research using sources of ionizing radiation, in accordance with applicable laws, regulations and University policies and procedures.

Clinical Research Handbook

A companion resource to the Sponsored Projects Handbook, geared to the clinical research coordinator. Also includes a chapter on FDA-regulated research.

Environmental Health and Safety Handbook

Gives practical guidance to faculty, staff and students who are conducting research using hazardous materials.

Postdoctoral Officers Handbook

Provides up to date, in-depth information on all policies, procedures and offerings for Columbia Postdocs.

Quick
Guide
for
Principal
Investigators

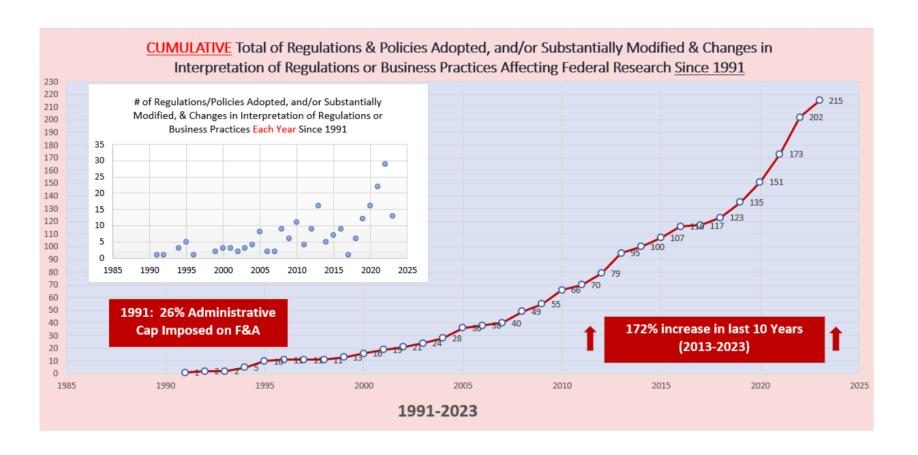

at Columbia University

Managing Academic Integrity

- Each university, especially R1s, has an office and officer in charge of research integrity
- Universities share best practices through national organizations
 - American Association of Universities (AAU), e.g., "Senior Research Officers" group
 - Council of Governmental Relations
- Universities and PIs are accountable to government funding agencies
- Research is highly regulated.

172% Increase in Number of *Changes* in Regulations (in last 10 years)

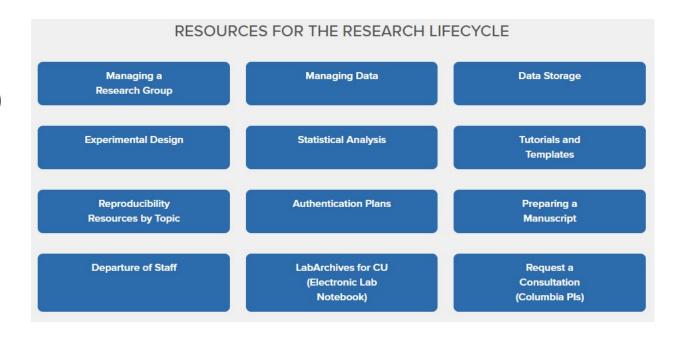

Figure 1: Cumulative Total of Regulations & Policies Adopted, and/or Substantially Modified & Changes in Interpretation of Regulations or Business Practices Affecting Federal Research Since 1991

Columbia University

- Research and Data Integrity Program (<u>ReaDI</u>)
 - Rich set of resources, training, and consultation for research community
 - ReaDI@columbia.edu

- Two training modules (February 2024) on the proper handling of digital scientific images
 - Expect all postdocs to take training
- Generative Al
 - University policy on the appropriate use in the classroom and for research

Looking Ahead

- Research security
 - Threat to NSDD-189 (Fundamental Research)
 - Reduction of foreign collaborations, especially a decoupling between US and China
- Generative Al
 - Unethical people will use generative AI to fabricate and falsify data in ways that are
 difficult or impossible to detect, increasing the risk that people will distrust science
 - There needs to be additional assurance that what researchers present are not "deep fakes." Minimally, scientists should not present Al-generated content as observations collected in the real world.
- Incentives in research
 - Consequences of "publish-or-perish"

Research Integrity in Industry: Two Stories

1. Facebook and Cornell authors publish "emotional contagion" 2014 PNAS paper, leading to massive uproar by public, press, and academia.

Experimental evidence of massive-scale emotional contagion through social networks

Adam D. I. Kramer^{a,1}, Jamie E. Guillory^{b,2}, and Jeffrey T. Hancock^{b,c}

^aCore Data Science Team, Facebook, Inc., Menlo Park, CA 94025; and Departments of ^bCommunication and ^cInformation Science, Cornell University, Ithaca, NY 14853

Edited by Susan T. Fiske, Princeton University, Princeton, NJ, and approved March 25, 2014 (received for review October 23, 2013)

Emotional states can be transferred to others via emotional demonstrated that (i) emotional contagion occurs via text-based contagion, leading people to experience the same emotions without their awareness. Emotional contagion is well established

computer-mediated communication (7); (ii) contagion of psychological and physiological qualities has been suggested based

2. Microsoft releases chatbot Tay on March 23, 2016...

...and shuts it down within 24 hours.

Follow-up by Tech Companies

- Ethics Review Board internal to company
 - Akin to privacy review boards and Institutional Review Boards (IRB) for human subjects research
 - Especially germane now for generative AI technology

- Partnership in AI created in 2016
 - Founding companies: Amazon, Apple, DeepMind, Facebook, Google, IBM, Microsoft
 - Now 123 industry, government, academia, and non-profit partners

Columbia University Upcoming Event

Symposium on Promoting Credibility, Reproducibility, and Integrity in Research (PCRI)

March 28, 2025

Theme: Generative Al

with participation from
Sheila Garrity and hopefully Marcia McNutt

4th in series: 2016, 2019, 2022 (virtual), 2025
